Test Method

A crude preparation of NOS obtained from the brains of male SD rats. The whole brain (including cerebellum) was homogenized in 5 volume (W/V) of 50 mM Tris buffer (pH 7.0 at 4°C), centrifuged at 48,000 x g for 20 minutes, the pellet discarded and the supernatant passed through 1/4 volume (V/V) of Dowex AG50WX-8 resin (Na⁺ form), in order to remove of endogenous arginine. The supernatant was collected, the pH adjusted to 7.0 at 22°C and this cytosolic preparation was frozen and stored at -80°C until required. In the binding assay, each drug was incubated with the brain cytozole (200

- 18 -

µg protein/tube) in a final volume of 0.15 ml of 50 mM Tris buffer including 10 µM CaCl₂ and 10 nM ³[H]Na (Amersham, Amersham, UK). Incubations were performed at 27°C for 90 minutes and were terminated by vacuum filtration over 0.3 µ polyethyleneimine pretreated GF/B glass fibre filters which were subsequently washed with 4 ml x 4 of 4°C distilled water. Non specific binding was defined by use of 100 µM Na. Data were expressed as inhibition % of specific binding.
